

Clearswift Web Appliance

The Clearswift Web Appliance is a standard web proxy designed to provide web security from 50 users upwards. It offers both inbound and outbound security for data uploads and downloads covering both normal and encrypted web browser traffic.

The Clearswift Web Appliance transforms the web from a high-risk environment to one where it's safe and secure for your staff to collaborate and conduct productive business freely. It reduces cost and complexity by consolidating and simplifying the day to day management of your acceptable usage policies and mitigates risk with its tightly integrated content-aware security technologies.

Clearswift Web Appliance

Secure content-aware web gateway

Time-based URL filtering

Anti-malware, anti-spyware

Content filtering, including HTTPS traffic

Web data loss prevention

Enable collaboration and increase productivity

The ability of Clearswift's MIMEsweeper content-aware engine to understand web content coupled to its policy flexibility allows you to enable and manage productive collaboration. Time and quota based controls allow your users the freedom to exploit collaborative web technologies like social networking, wikis, blogs, and webmail.

Reduce total cost of ownership

Operational and running costs are reduced as the Clearswift Web Appliance consolidates multiple point products and is easily integrated into your network infrastructure. The common policy console and peering features, integrated with Clearswift Email Appliance, lower administration overheads, while the flexibility to deploy on your own hardware, or virtualized in VMware, saves time, money and footprint.

Minimize risk of data loss and security breaches

The inspection of all web content, including encrypted web traffic, web-mail and web postings such as Twitter, prevents data losses, stops inappropriate language and ensures your compliance and audit requirements are met. The integrated security deals with malware web threats by policing every data exchange to block unrecognized data, prevent malware and spyware and provides URL category filtering (all updated automatically).

"Clearswift has delivered an impressive range of features with its web appliances"

PC PRO Magazine – March 2009

"Clearswift delivers strong web content filtering with an easily deployed appliance based solution."

IT PRO – October 2008

Why's the Clearswift Web Appliance different?

The Clearswift Web Appliance is designed to provide your employees with the freedom of safe and productive collaboration.

Tight integration with the Clearswift Email Appliance simplifies administration and enforces consistent policy enforcement while consolidated data loss prevention and malware security reduces complexity of multiple point products.

The common interface reduces complexity, increases effectiveness and allows security management to be shared.

Over 20 years development is invested in providing the adaptable policies designed to reflect the way people really work and to allow the positive communications and collaboration necessary for business success.

In brief

Multiple web and email appliances may be peered together and have their policy updates managed from any appliance in the peer group. The standard default web policy is easily customized to an organization's acceptable usage requirements and is typically deployed in under an hour.

The MIMESweeper content-aware engine is supplied with pre-built managed lists covering multi-language profanity and common business terms plus editable compliance terms lists and lexical expression checks such as credit card number and national/social security number identification.
